GATE VALVE, RISING STEM FLANGE

Description: A gate valve is generally used to completely shut off fluid flow or, in the fully open position, provide full flow in a pipeline. Thus it is used either in the fully closed or fully open positions. A gate valve consists of a valve body, seat and disc, a spindle, gland, and a wheel for operating the valve.

|-------------------------|---|
| MODEL | EFF-RGV-020 |
| Working pressure | 16 bar |
| Flanges | ANSI 150LB BS 5404 |
| Available Size | DN50 thru DN800 (2" thru 32") |
| Material | Body - Ductile Iron,QT450 |
| Material | Bonnet - Cast Iron/Ductile Iron |
| Material | Seal - Ductile Iron,QT450 Cover By NBR |
| Material | Stem - 2CR13 Stainless Steel |
| Material | Follower Gland - Cast Iron/Ductile Iron |
| Material | Support- Ductile Iron,QT450 |
| Temperature | 0°C to 100°C |
| Service | Water, Air |
